

-
- **Dr George Leckie, Reader in Social Statistics, Centre for Multilevel Modelling and Graduate School of Education, University Bristol**
 - I have extensively analysed the National Pupil Database, a Department for Education longitudinal administrative census of all students in English schools
 - Contains Key Stage test scores, GCSE and A-level exam results, student and school socioeconomic and demographic characteristics and locations
 - Underlies league tables, Ofsted reports, EEF trials, commercial data products
 - Widely used by researchers (e.g. school funding, grammars, free school meals)
 - My research critiques the official league tables and explores competing approaches for making school comparisons and visualising uncertainty
 - I co-organise the NPD User Group annual conferences
 - I am also advising HEFCE on their 'learning gains' methodology for HE and am advising the World Bank and Bulgarian Ministry of Education on their value-added multilevel models for their new school performance monitoring system
