What? We use fun, interactive robotics workshops in primary and secondary schools to teach children about the principles of science, technology and engineering.

Why? To engage children, especially girls, and spark an interest in STEM subjects.

Who? Robogals is a global student-run organisation with branches all over the world. Robogals Bristol is a University of Bristol volunteering society. Volunteers are students, both male and female, from all science, engineering and technology backgrounds.

How? To get involved, find us on facebook (search Robogals Bristol), or, if facebook isn’t your thing, E-mail Thomas@robogals.org.uk.

Interested in teaching? Join Robogals!
