September

Exploring a Sacred Lotus

At the University, worked with At-Bristol to run activities throughout the week. Bristol Neuroscience, which brings together all neuroscience research and communication between students.

in two Delhi schools, and students' experiences were assessed. Initial results with several Indian non-profit organisations. Multi-touch tables were installed examining the use of interactive technology in schools in India, in collaboration with Dr Sri Subramanian from the Department of Computer Science led a project EPSRC-funded research will lead to better traffic-flow forecasting and help position sometimes combine in a 'perfect storm' to create these jams. The Mathematical modelling revealed that changes in vehicle speed and road into the causes of 'phantom' traffic jams (ie jams with no apparent cause).

April: Brain Week

Doctoral thesis defence of Dr. Eirini Diamanti

Dr Eirini Diamanti, in the Department of Imaging Physics, published her research on the use of ultrafast magnetic resonance imaging in brain imaging. Her work focused on how to improve the imaging of brain function and how this can be used to understand the brain of patients with neurological disorders.

May

May: Mental公園 PARKS

Brain Week in March was a huge success, and the University’s Centre for Excellence in Neurosciences has continued to support the excellent work of our researchers.
