Surface Hub: Troubleshooting HDMI connections

The Surface Hub *should* automatically detect the main tutor desktop PC, if it’s switched on.

If the Surface Hub isn’t showing what’s on the monitor, perform a quick troubleshoot of the HDMI connections.

There are three to check:

*The monitor*

*The floor panel*
**The box connection in the desk** (can be a bit awkward to reach)

For each connection, try unplugging the cable and plugging it back in again.
