

What do maths students do after their course?

Mei Lin Roberts

MSci Mathematics

2019

After graduation, I am going to join the graduate Audit programme at KPMG, where I will gain my ACA qualification.

At the beginning of my third year, I applied to many accounting firms for an internship, and was very fortunate to secure an offer from KPMG. This took place during the summer between my third and fourth year of University, and at the end of my internship I gained an offer for the graduate programme.

Joining a career in Accounting and Finance has always been my chosen career path but I did talk to many other students who were deciding what they wanted to do after graduation.

What career advice would you give to a student preparing to graduate?

I would advise them not to panic. Consider all the options available, including academia, commercial job or self-development; but don't let this overtake your life. Attaining a good degree classification could be a benefit when you make the choice for how you want your future to develop.

What career advice would you give to a first or second-year student?

I would advise students that were uncertain to talk to their peers or final year students about the options that are available.
