

	BSc Accounting and Finance	BSc Accounting and Management	BSc Economics and Accounting	BSc Finance
	This course broadens knowledge in both disciplines. Accounting subjects will provide you with insight into accounting institutions, firms, regulations and techniques used by organisations. The Finance subjects explore financial instutions, trading, investment, regulations and structures that support the market.	This course combines accounting and management subjects. It equips you with the attributes needed to pursue a wide range of accounting, consulting, and managerial career paths as a future decision-maker. You will develop your transferable skills and ability to interpret, assess, and communicate financial and non-financial data.	This course broadens knowledge of Economics and the linkage between Accounting and Finance. With insight into economic structures, accountancy firms, institutions, policies that underpin and influence markets, regulations and techniques that are used by organisations both in and outside the market.	This core finance course provides training in all areas of finance, with a focus on the quantitative skills that are required in every aspect of real-world decision-making. It covers new and disruptive forms of finance including cryptocurrencies, FinTech, Big Data analysis, smart beta investing, peer-to-peer lending or high-frequency trading.
