

Pattern	Description	En face view		Top down view	
Central	Less than .5 x of the interface diameter in all dimensions, more than .2 x of the interface diameter away from the interface edge				
Invagination	as central, but $> 1 \mu\text{M}$ inside the T cell				
Peripheral	Any pattern excluding the central quarter of the interface				
					
Diffuse	Any pattern containing both central and peripheral elements				
					
Lamellum	Accumulation covering the entire interface more than .2 x the cell diameter deep and coinciding with a visible lamellum				
Distal	Accumulation in a sub region of the posterior half of the T cell
