

Bristol Continuity of Care Calculator

Benchmarks

Over 700 general practices have now registered to use the Calculator. The figures below show the range of scores from the first 100 practices that have used the Calculator and shared their results with us. You can use these results to reflect on how continuity is provided in your practice.

Continuity results based on 100 general practices July 2026.

Please send us your results if you haven't already

If you have used the Calculator but haven't yet sent us your results, please [click HERE to enter your results](#). The more practices send us their results, the more representative our benchmarks will be.

Research opportunity

We are using the Calculator in a research project to understand more about how continuity varies in different types of general practices, depending (for example) on practice size, deprivation, use of personal lists etc. As part of this project, participants will get a detailed report of how their continuity compares to other similar and different practices. More information and the link to sign up, can be found here - <https://www.gppact.org/accessing-continuity>
