

Updated process to oversee the safe introduction of new procedures, access full information here

Follow NICE guidance

Clinician wishes to introduce a new or changed procedure - is there existing NICE guidance?

No 🌗

Is NICE gathering further information?

Yes

New procedure should only be used in the context of research* until NICE guidance published Yes —

NICE develops
guidance

Notify the procedure to NICE

Hospital local committees should ensure compliance with NICE guidance⁺

- research approvals
- patient information & monitoring
- reporting of outcomes
- oversight of required training and resources

NICE decides to gather further information about the procedure to make recommendation

NICE considers procedure established or a minor modification of established procedure (not selected)

Hospital local committees should ensure adequate training and resources are available to undertake the procedure safely in their hospital
